

Why gamble with your health?

As of August 2019, the UK is no longer considered measles free by the World Health Organisation

- ✔ Measles can be life threatening
- ✔ There is no evidence that the MMR vaccine causes autism
- ✔ Complications occur in as many as 1 in 3 cases of measles
- ✔ Measles can lead to pneumonia or encephalitis (swelling of the brain)
- ✔ If pregnant women contract measles, there is a risk to their unborn baby
- ✔ Vaccination for your child/children is free of charge on the NHS

MEASLES IS PREVENTABLE

Follow your child's immunisation program or book an appointment to see the Practice Nurse as soon as you can.
