

Our clinical system has two settings to allow you to control how your medical information is shared:

1. Sharing OUT

This controls whether your information entered at this GP Practice can be shared with other NHS services (i.e. It is made shareable).

2. Sharing IN

This controls whether information that has been made shareable at other NHS care services (for example a hospital department) can be viewed by this GP Practice (i.e. It is shared in).

Now please think carefully and answer the following questions:

1. Do you consent to the information that is recorded about you here being made available to other NHS care services that care for you and also use SystemOne?

If you answer YES

Clinicians at other services that care for you and use SystemOne will (with your consent) be able to see the information recorded here. For example, a district nurse that visits you would be able to see the data entered by your GP.

If you answer NO

The clinician will be prevented from sharing the information entered here with other services caring for you.

Having read Question 1 now circle either YES or No

2. Do you consent to allow this GP Practice to view information about you that has been recorded at other services where you also receive care? (You must also have consented for information to be 'shared out' of those services)

If you answer YES

This GP Practice will be able to view information recorded on your patient record by other NHS services.

If you answer NO

This GP Practice will not see any information recorded at any other NHS service (even if those services have the consent to share information out).

Having read Question 2 now circle either YES or No
